Smart CHANGE

The World Health Organization estimates that more than 70% of deaths worldwide, including up to 90% of deaths in the European region, are due to non-communicable chronic diseases. By harnessing AI to create advanced risk prediction models and encouraging healthy lifestyles, SmartCHANGE will fight back against cardiovascular and metabolic ailments all over Europe. SmartCHANGE represents a revolution in health monitoring and wellness encouragement for youth, as well as preventing their risks of contracting diseases later in life.

Transforming youth health with AI

An AI engine for youth health: it empowers doctors with risk predictions, delivers family-friendly health guidance, and evolves through community collaboration.
